

TAKE THE HEALTH OF YOUR FEET INTO YOUR HANDS

D-WORK prophylactic footwear for diabetics complies with all requirements on healthcare aids. Its use has a positive effect on the condition of feet during the disease, reduces the risk of foot damage, and slows down the disease progression. The footwear has undergone numerous clinical and practical tests and the results have been reviewed by an expert committee and a committee of the MIT CR. The final evaluation of the footwear recommended an immediate start of production.

The unique signs of D-WORK footwear:

- A lasting shape with enough room inside the shoe, especially in the toe part, to respect the need for both foot fixation and free room as the volume changes throughout the day during exercise and other activity.

- The shoe design and the upper cut comply with requirements for a safe shoe interior, and the materials used provide maximum walking comfort. Their anti-fungal and antibacterial properties increase the already high level of shoe comfort.

- The entirely new design of the insole secures the shape of the shoe and the sock lining, which is in direct contact with the foot; above all, their connection and joint influence on the base of the foot have a positive effect when wearing the shoe. The materials used and the positions of the components provide a firm yet flexible support when walking, distribute and reduce local pressures on the base of the foot as it proceeds during the step, quite essentially reducing the risk of ulceration (pressure sores) on the foot. Reducing the risk of pressure sores **REDUCES THE RISK OF DEVASTATING INJURIES LEADING TO IRREVERSIBLE IMPAIRMENT OR EVEN AMPUTATION.**

The absolutely unique properties of D-WORK shoes make them suitable for not only diabetics, but overweight people, seniors, pregnant women, and people with orthopaedic problems. Furthermore, they can be used beneficially by people who work standing up in light-labour operations and outdoors (waiters, postmen, warehouse operators, shop assistants, machine operators, assembly line staff, etc.). D-WORK footwear has been certified by the Testing and Certification Institute in Zlín.

If you care for the quality of your own life, take a chance and wear quality D-WORK shoes.

Ladies' outdoor footwear
size: 37-42

Ask your diabetologist specialist or podiatrist about D-WORK shoes.

SHOES FOR WORK, LEISURE, AND YOUR HEALTH.

Prophylactic (targeted prevention) footwear for diabetics, marketed under the trademark D-WORK, is the ultimate outcome of 3 years of research and development by a team of physicians, specialists on problems with diabetes mellitus, footwear manufacturers, technologists, model makers, and marketing professionals. The research and development for this footwear has been conducted with financial support from state budget funds by way of the Ministry of Industry and Trade of the Czech Republic.

Diabetes mellitus is a lifestyle disease with over 800,000 patients registered in the Czech Republic today. The demographic curve shows a notably rising trend, the age of newly identified patients is decreasing, and the effects of the disease are seriously devastating if untreated or wrongly treated. There are currently over 8,000 patients with amputated leg sections in the Czech Republic. IT MIGHT NOT HAVE HAPPENED IN THE OVERWHELMING MAJORITY OF CASES IF THEY HAD PAID MORE ATTENTION TO THEIR TREATMENT, INCLUDING THE USE OF PROPHYLACTIC FOOTWEAR. Each patient is thus responsible for the choice between a longer, better life or a progressive, irreversible and restrictive health impairment or amputation.

Our objective was to develop an entirely unique product combining the findings of research and measurements of more than 2,000 diabetes patients, the needs of physicians - specialists on preventing and treating the disease, and the capacities of footwear manufacturers, including the use of new devices, machines, materials and technologies.

Quality prophylactic footwear for diabetics has thus far been missing on the market, and we are going to offer more models with respect to activities recommended by specialists to people with the disease.

Up to 15 extra years on healthy feet.....

The development of D-WORK footwear has employed the latest scientific findings on preventing diabetic foot syndrome, the correct design of prophylactic shoes for diabetes patients, and the results of our own research, in which I have been involved personally.

I can warmly recommend D-WORK shoes to everyone with diabetes: they conform to the strictest requirements on shoes for preventing serious damage to feet as a consequence of diabetes.
